Hi, I purchased a Macbook Pro (OS X) final 7 days and installed it with the trial edition of AutoCAD LT 2015 for Home windows via VMWare Blend.. The file is broken and could not really be repaired ' Actually if AutoCAD states 'Storyline and publish work full, no errors or alerts discovered,' the error message seems on both Preview and Adobe Reader, and actually Safari, when I try to open the PDF documents I printed.

It ran effortlessly and without a problem until last night I printed a plan to PDF but when I tried to open the PDF document, an mistake message held popping up that states 'There has been an error starting this document.
